NUR 113
Sexuality

Description: This module introduces the concept of sexuality. Emphasis is placed on family planning and preconception counseling, menopause, menstrual dysfunction, and sexually transmitted diseases.

Learning Outcomes:
Upon completion of this module the student will be able to:

1. Identify assessment data for family planning and contraceptive teaching.
2. Describe health promotion and maintenance activities for issues related to sexuality across the lifespan.
3. Employ the interdisciplinary team for the management of sexuality issues.
4. Apply pharmacological interventions in caring for the patient with sexual needs.
5. Develop a plan of care to meet the sexual needs of the patient.
