NUR 211
Immunity Module

Description: This module focuses on the concept of immunity. This module will be at NUR 211 and will focus on Rheumatoid Arthritis, HIV/AIDS, Hypersensitivity, Lupus.

Learning Outcomes:

1. Demonstrate knowledge of the anatomy and physiology of the immune system by discussing the pathophysiology of immune response to include but not limited to Rheumatoid Arthritis, HIV/AIDS, Hypersensitivity, and Lupus.

3. Apply evidence-based practice to plan individualized nursing care for clients with altered immune response.

4. Identify nursing interventions and client teaching, including rationale, for the nursing care of clients with altered immune response.

5. Coordinate nursing care of clients experiencing altered immunity with interdisciplinary team members.

6. Following evaluation, revise the plan of care as needed to provide effective interventions to promote, maintain, or restore functional health status to clients with altered immune response.

Learning Resources:

Websites: www.cdc.gov
          www.unaids.org
          www.nlm.nih.gov
          www.prenhall.com/lemone
Learning Activities:

1. Develop a concept map for clients with Rheumatoid Arthritis, HIV/AIDS, Hypersensitivity, and Lupus

2. Demonstrate musculoskeletal assessment and identify rehabilitation therapies.

3. Critical thinking exercise: Analysis of diagnostic studies, pharmacodynamics, and response to treatment

4. Discuss client teaching for clients with altered immune response to include: environmental safety, safe sex practices, condom application, and special skin care needs.

5. Videotape: AIDS: The Heart of the Matter

6. Care for a client with an altered immune response.

Evaluation:

Return demonstration of lab activities
Unit Exam
Drug Quiz
Clinical Performance Evaluation
